THE FUTURE OF EXPANDED POLYSTYRENE

## POLY-TILE

Poly-Tile is a foam plastic lay-in panel for suspended ceilings. They are constructed of high-performance, rigid insulation consisting of a closed-cell, strong, but lightweight premium quality expanded polystyrene (EPS). Poly-Tile is economical, being the lowest price on the market. It is highly energy saving with a high insulation value. Poly-Tile also reduces unpleasant sounds and is visually attractive in almost any room, with a white pebble finish.

Poly Tile is a melt-away tile and ideal when used for installation beneath automatic sprinkler systems!

Poly-Tile is environmentally safe, 100% recyclable. The material conforms with the Uniform Building Code, BOCA; the Basic Building Code, ICBO; the Standard Building Code, SBCC; and has FHA acceptance.

### Advantages of EPS:

- ◆ Recyclable
- ◆ Long Term Warranty
- ◆ Lightweight
- ◆ Proven performance
- ◆ Fire resistant
- ◆ Cost effective
